

Subject: Churchland High School - Radio Repeaters

In addition to the repeaters that have been installed in numerous police vehicles, two stationary radio repeaters have been installed inside Churchland High School, one for Police 1 and the other for Fire 1. Turning your radio channel dial to the last selection should put you on the "Reptr-Access" channel which will allow you to broadcast and receive transmissions on Police 1. The range has been tested at various locations in and around the school by the Information Technology Dept., and the equipment should provide some added safety in the immediate area. Additional stationary repeaters will be installed in other problem areas in Churchland in the near future. Keep in mind that the range is limited for these repeaters, but please let me know if you experience any problems with their operation.
